

k permeability of one honeycomb, $D = 4 \cdot 10^{-3} \text{ m}$, $\varnothing = 103 \cdot 10^{-2} \text{ m}$
 μ is the viscosity of air = $1,8 \cdot 10^{-5} \text{ Pa.s}$, for one honeycomb $L = 16,5 \cdot 10^{-2} \text{ m}$

$$k = AS / (A1 + A2)$$

$$A1 = A2 = (D^2 \cdot \sqrt{3}) / 4$$

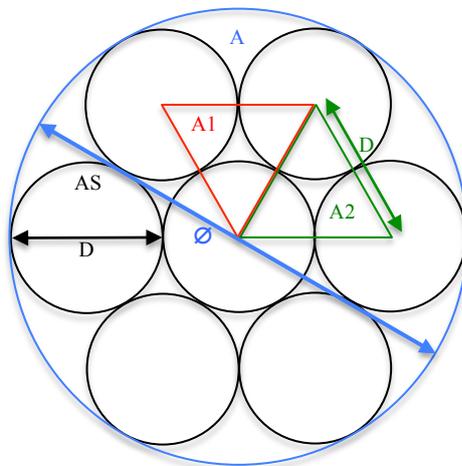

$$AS = (\pi \cdot D^2) / 4$$

$$\text{So : } k = [(\pi \cdot D^2) / 4] / [2 \cdot (D^2 \cdot \sqrt{3}) / 4]$$

$$\text{Or } k = [(\pi \cdot D^2) / 4] / [(D^2 \cdot \sqrt{3}) / 2], \text{ So } \boxed{k = \pi / (2 \cdot \sqrt{3})}$$

$$A = (\pi \cdot \varnothing^2) / 4$$

$$\boxed{\bar{V} = (k \cdot A \cdot \Delta P) / (2 \cdot \mu \cdot L)}$$

$$\boxed{\bar{V} \approx 1,27 \cdot 10^5 \cdot \Delta P} !?$$
